

THE RIGHT EQUIPMENT FOR HASSLE-FREE FEEDING

For over 50 years our products have put the right parts, in the right place, at the right time. Our customers trust our proven solutions for around-the-clock reliability and accuracy. We proudly claim Made In America and support all our equipment with on-site service. We encourage the next generation of skilled tradespeople through our participation in educational advisory boards, funding student facilities improvements, and providing paid internships and scholarships.

FEEDER SYSTEMS

Delivering parts accurately, efficiently and quickly has been our specialty for over 40 years. Our vast customer list includes; automotive, healthcare, ammunition, housewares, pet goods, plumbing, and cleaning products. With bowls up to 42" in diameter there isn't too much we can't handle. We are exceptionally good at the more challenging parts. Jerhen Industries also builds inline tracks, inline feeders, centrifugal feeders, custom escapements, and dead-nests.

ROLLER SORTERS

Simple to set-up, easy to use, and always reliable. Our wide range of models start with the 24" single-lane bench-top sorters and go up to the 48" high-speed, 4-lane sorter. Typical options include a heavy-duty base, vibratory storage hopper for parts feeding, or heavy-duty casters for portability.

STORAGE HOPPERS

Our family of heavy-duty, vibratory storage hoppers are as reliable as they are durable. The **Jerhen Industries “standard” hopper** uses a straight front discharge. Six hopper volumes are available, from 1/2 to 6 cubic feet. Our standard adjustable height base makes for true plug-and-play integration.

Our **super hoppers** are built of 11 gauge cold roll steel with hopper volumes starting at 3 cubic foot. Each super hopper is mounted to a custom, heavy-duty, steel base fabricated specifically for your application.

(shown with optional casters)

WL-1051-6

Having a reputation for durability and dependability make the Warren loader a leader for industrial parts loaders. We offer discharge heights from 3 feet up to 13 feet. Our standard hopper volume is 6 cubic feet, with optional 3, 12 and 14 cubic foot hoppers available. Our exclusive enclosed buckets eliminate parts jams. We offer many options including heavy-duty casters for mobility, double wide conveyors for larger parts, and magnetic conveyors for ferrous parts that won't work well with our standard buckets.
